# MEET THE NEW LEVER GROUP: **SLIM JIM** IDROCOMPRESSO

This machine combines features of our classic Mirage and our high-end Spirit.

The Slim Jim Idrocompresso boasts our well known signature in looks as well as in performance and build quality.

## TECHNICAL FEATURES

- Multiple boiler system: one boiler per group, PID temperature controlled, each fed with water preheated to near target temperature by a huge thermo loop heat-exchanger, equipped with automatic temperature adjusting. The lever group cylinder is completely surrounded by the hot water that will be used to brew (all around & underneath bottom). Temperature stability is magnificent.
  - Actual temperature at each group is displayed in extra large digits.
  - The old lever group's inherent danger to hit the barista when accidentally bouncing up has been deleted by our own newly developed locking mechanism.
  - Pressure gauge per group indicating real-life extraction pressure development at the puck.
  - Large lever slowly returns to its start position, indicating the proceeding extraction in the proper old school way.
  - A small lever next to each group to purge & clean group screen. No need to pull the big lever. This same lever is also used to stop the extraction immediately at whatever position. The group lever then quietly returns to its resting position.
  - No filter holder sneeze, one can proceed swiftly when extraction is finished.
  - Cool PEEK dispersion plate: remains clean very long, does not absorb heat from brew water.
  - Adjustable spring pressure.
  - Adjustable infusion pressure.
  - Smooth, membrane-type E61 group screen by IMS.
  - Two different temperatures of hot water.
  - Drain tray easily adjustable in height.
  - Isolated, powerful steam boiler - up to 6.000Watt.
  - All stainless steel construction.
- OPTIONAL:**
- Foot activated steam valves.
  - Sneeze guard awning.
  - External temperature probe.
  - External pump to adjust to any possible infusion pressure, especially recommended when line pressure fluctuates.

## VIRTUAL ENDLESS CUSTOMISATION POSSIBILITIES

Next to the high build quality and strong performance in extraction and steam, our machines' main point of difference has since 1984 been their design. We intend to exploit our experience in this field to its full extent. The Slim Jim offers a wide array of appearances. Everybody can now have their own bespoke machine, be it the aspiring espresso bar owner or the chain of shops. One may choose between many different, visually defining parts like legs, front panels, side panels, cup rails, colours, awnings, colour of knobs/handles, groups, etc. All parts are interchangeable.
